

CCMBX Connector

Secure FTP for CCMBX mailbox traffic management

CCMBX Connector is an easy-to-use yet powerful secure FTP client for managing the data flows between the **CCVAN/CCMBX** mailbox and the clients computer system.

In comparison to most standard windows FTP clients which are user driven for manual up-/download the **CCMBX Connector** was specifically designed and implemented as a service to support unattended operation without any user interaction.

This proves as a major advantage over general purpose built FTP clients who may wait for a user input during a session even when script driven. A simple Start-/ Stop Button lets the user start the configured schedules and no further interaction is required.

KEY FEATURES AND BENEFITS

- **Simple** - **CCMBX Connector** is easy to install with CCMBX access already preconfigured. Simple Start/Stop Button lets you switch on and off the service.
- **Flexible** - **CCMBX Connector** has extensive customisation options to fit your business schedule and file movement requirements.
- **Secure** - Files transferred to and from the mailbox are protected using secure FTP over SSL, SSH, and HTTP/s transfer protocols.
- **Reliable** - **CCMBX Connector** leaves a very small footprint on the system. The program runs as a service and therefore does not require any user interaction.
- **Supervision** - with extensive built in logging and debugging facilities it is easy to analyse communication sessions and involve CC support if a communication session fails.
- **Future proof** - **CCMBX** service updates and new functionality will be automatically incorporated in the **CCMBX Connector**.

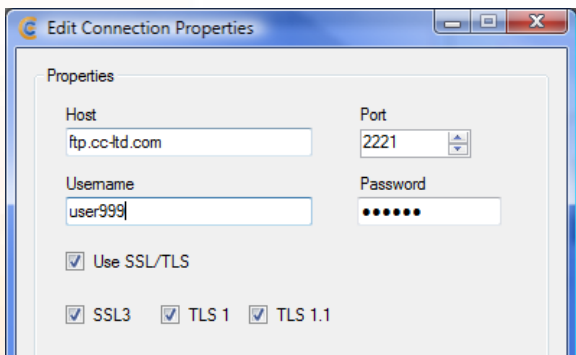

A simple and task oriented User interface lets user choose between:

- **Configuration** - the CCMBX Network definition, security protocol and login settings.
- **Scheduling** - the schedules for up- / download of files and file related settings.
- **Manual Mode** - for ad-hoc interactive up- / download of files and expert debugging.
- **Activity Log** - supervise, track and trace of transactions history.

SOLUTION DETAILS

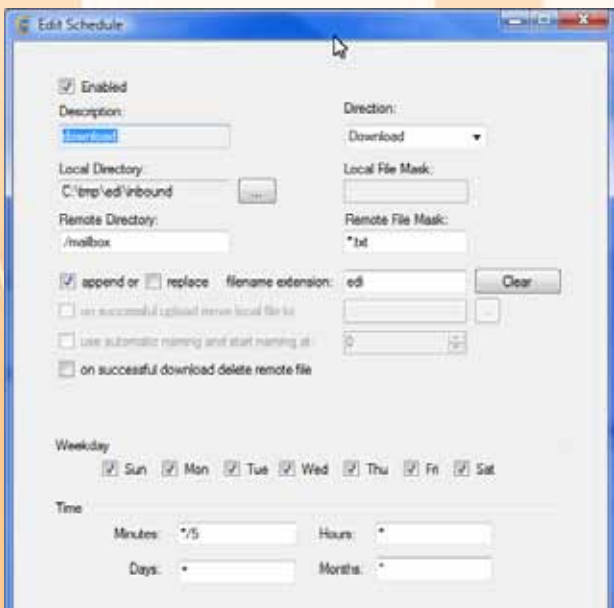

Configuration

A simple configuration window with predefined **CCMBX** connectivity parameters allows even novice user to setup **CCMBX Connector**.

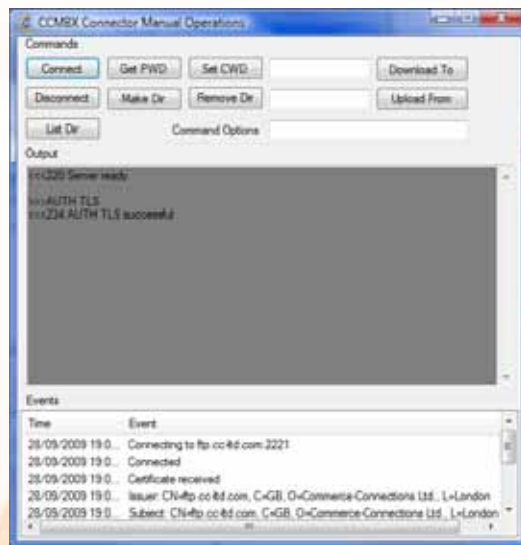

Schedule

The scheduling panel allows users to schedule recurring up or download tasks using any date and time combination available. Extensive file mask options enable file pick up and naming to suite a typical production environment.

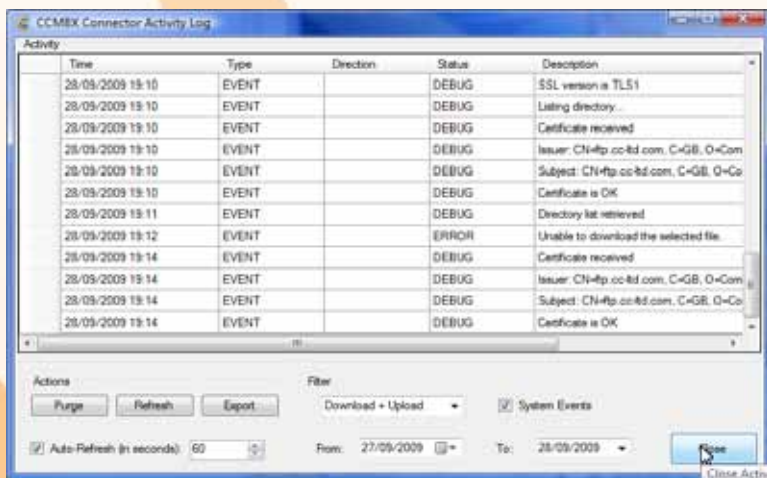

Manual Mode

A manual mode or expert mode allows the user to upload ad-hoc files but also the submission of individual FTP commands for debugging and test purposes.

Activity Log

All **CCMBX Connector** activities are recorded in the activity log which is searchable and can be exported for archive or analysis purposes.

Commerce-Connections Limited is an independent B2B solutions provider with HQ in Woking, UK and branches in Hong Kong and mainland China.
